

Suggestions

1. Users should be able to register with their existing Boeing emails, but they should fill in the registration form. Fields that are required to fill in are: first name, last name, email and password. Are there any more fields that you would like to have in the registration form?
2. Regarding creating password, for security reasons, we recommend to have at least 8 characters, including minimum one upper case letter and one symbol.

Additional questions

1. What is the download limit per user?
2. What is the maximum file size?
3. What is your company's domain?
4. Will You provide us with data base with registered users or we should create fake data base for testing purposes?
5. Should a user's session expire after an hour even if the user is using the application or should it expire after an hour of not using it?
6. Will users be able to add profile pictures?
7. Would you like an option for the password field to switch between visible and hidden?
8. Would you like an option to support other languages besides English, if yes, which ones?
9. What fields can be modified after user registration?

Performance questions

1. What do you perceive as your major security risks?
2. Is there an expected point of time when a substantial number of users will be logging in?
3. What is the average time that the user will be spending on the platform per day?
4. What is the user fluctuation number estimated over the timeframe of three months?
